- The Max. feed of 5D holders is 70%~80% of the max. conditions of 2D/3D/4D holders
- In interrupted machining part, reduce 30~50% of feed from the above machining around interrupted part

## Required cutting power

- The graphs below show the cutting force required in drilling
- Machining with the King Drill and a machine with high rigidity and power

■ **Workpiece** SCM440 (240HB)

■ **Cutting conditions**  $vc$  (m/min) = 100, Through coolant system

$f_n$  (mm/rev) = 0.13       $f_n$  (mm/rev) = 0.10       $f_n$  (mm/rev) = 0.07

## Cutting oil quantity

■ **Workpiece** SCM440 (240HB)

■ **Cutting conditions**  $vc$  (m/min) = 100, Through coolant system

- The data of the graph above could be changed depending on workpiece and cutting condition

## Notice for setting the drill in the lathe

- Set the peripheral insert parallel to the X axis. (based on the side lock)
- If the machined core is 0.5 mm after machining 5 mm, that is the proper setting
- ※ Please make sure that the location of the side lock could be different depending on manufacturers of machine

### ◀ Range of adjusting machining diameter in the lathe

- In machining in the lathe, the King Drill can extend and reduce the machining diameter by adjusting the x-axis. Please refer to the table showing the range of adjusting drilling diameter below
- The more the drilling diameter is extended or reduced, the more the drill loses drilling balance. In this case, reduce the feed or cutting speed in machining
- Reducing the machining diameter excessively could damage the holder

- In case of interrupted machining, reduce the feed to 0.1~0.15 around the interrupted part
- In case of 10D ~12D, follow the recommended cutting conditions below.
- In case of stainless steel machining, machine under low feed first then, set the best cutting condition checking machinability gradually

## How to make good insert clamping

① Clean the mounting seat with air or cloth

② Put an insert on the holder

③ A part of wrench and B part of insert must be parallel to each other before clamp the insert  
Turn the wrench clockwise to finish clamping

## Recommended cutting conditions in deep hole (10D, 12D) drilling

### • Drill with a pilot drill (recommended)

1. Drill a beginning hole (with a pilot drill)	2. Start drilling
Drill a beginning hole to the depth of $0.5D$ and 70% less cutting speed using a $1.5D$ or a $3D$ drill.	After replacing the drill to a new one, start drilling under the recommended cutting conditions.

### • Drilling without a pilot drill

1. Drill a beginning hole (without a pilot drill)	2. Stop drilling	3. Ready for drilling	4. Start drilling
After drilling to the depth of $0.5D$ with 70% less cutting speed, stop drilling for 2~3 seconds without taking out the drill.	After taking out the drill without the injection of the coolant to the hole, stop machining for 2~3 seconds.	Insert the drill to the depth of 2~3 mm higher than the surface of the bottom of the hole and be ready to machine during 2~3 seconds after starting the injection of the coolant.	Start drilling under the recommended cutting conditions

## Replacement of Holders and Screws

Worn part	How to check	Description
[Pic.1] 	[Pic.2] Check the gap 	<ul style="list-style-type: none"> <li>In case of drilling for a long time as shown in the [Pic.1] the 'A' part is torn and twisted due to torque.</li> <li>As shown in the [Pic.2] check the gap between the insert and the tip seat turning the clamped insert from side to side. If there is a gap between them, replace the used holder to a new one.</li> </ul>

[Pic.6] ① Check the 'C' and 'D' parts as shown in the [Pic.6] ② Check whether the chips are getting longer or not.		<ul style="list-style-type: none"> <li>Winding or jamming of long and tiny chips in drilling causes wear or scratch on the 'C' part as shown in the [Pic.6] due to chattering from machining in improper cutting conditions. ## How to Clamp a TPDB Plus Insert

### Clamping an insert to a holder

[Pic.1]

- ❶ Put an insert on the tip seat of the holder.
- ❷ As the [Pic.1], push the insert to the v-shaped groove of the holder.
- ❸ Screw and clamp the insert.

### Changing the used insert to a new one

[Pic.2]

[Pic.3]

- ❶ Unscrew and separate the used insert from the holder.
- ❷ As the [Pic.2], clean the insert seat.
- ❸ Put a new insert on the tip seat.
- ❹ As the [Pic.3], clamp the insert pushing it with a hand not to separate from the holder.

## Precaution in Drilling

### Drilling of angled entrance

1. The approach angle between drill and the workpiece at the beginning should be less than 6°.
2. Reduce the feed to 30-50% than general cutting conditions at the beginning and the end of angled surface.

### Drilling of stacked plates

1. Gap between the plates could make wrong chip evacuation causing fracture of the drill.
2. Place the workpiece, stacked plates without any gap between each.

### Plunging

1. Irregular cutting resistance in plunging could cause fracture and deformation of the drill.

### Boring

1. Boring is not recommended due to wear and chipping in the corner of the insert.

## Check Point in Drilling

- Condition of the clamped workpiece
- Revolution of the main axis of the machine
- Condition of the holder
- Run-out of the clamped drill (Max. 0.03 mm)
- Condition of supplying coolant (pressure, floconcentration)
- Chip evacuation

## Supply of Coolant

- Supply enough coolant to the beginning of the hole.
- Minimum pressure of oil coolant: 5 bar
- Minimum flow of coolant: 5 l/min

## Recommended Drilling Method (10D, 12D)

### Machine a beginning hole (with a pilot drill)

- Machine a beginning hole with the depth of cut as 0.5D and at 30% lower speed using a 1.5D or 3D drill.

### Start drilling

- After machining the beginning hole, replace the pilot drill to a drill for drilling and machine in recommended cutting conditions.

## How to clamp a TPDB-H insert

### Clamping an insert to a holder

[Pic.1]

- Put an insert on the tip seat of the holder
- As the [pic.1], push the insert to the v-shaped groove of the holder
- Screw and clamp the insert

### Changing the used insert to a new one

[Pic.2]

[Pic.3]

- Unscrew and separate the used insert from the holder
- As the [Pic.2], clean the insert seat
- Put a new insert on the tip seat
- As the [pic.3], clamp the insert pushing it with a hand not to separate from the holder

## Precaution in drilling

### Drilling of angled entrance

- The approach angle between drill and the workpiece at the beginning should be less than 6°
- Reduce the feed to 30~50% than general cutting conditions at the beginning and the end of angled surface.

### Drilling of stacked plates

- Gap between the plates could make wrong chip evacuation causing fracture of the drill.
- Place stacked plates without any gap between each

### Plunging

- Irregular cutting resistance in plunging could cause fracture and deformation of the drill.

### Boring

- Boring is not recommended due to wear and chipping in the corner of the insert.

## Indexable Drill Clamped with Center Drill

### Code system for drill

### Code system for cartridge

### Code system for center drill

### Grade of center drill

## How to clamp the drills

### Feature of corn-point system

- Convenient and quick adjustable heights when inserting the center drill
- In case the center drill brakes while in usage, it can be replaced with the bolt for adjusting cone point
- The bolt for adjusting cone point prevents chattering on the center drill

## Clamping

1	2	3	4	5
Place a center drill	Clamp insert and cartridge	Adjust the center drill with the bolt for adjusting cone point	Clamp the center drill firmly with fixing bolt	Reassure the clamp with bolt for adjusting cone point

- ※ Use safety covers for your safety when clamping the center drill and insert
- ※ When machining, be careful of the drill disk

## Length of the 'a' part of center drill

The length of 'a' being too short can cause bad surface finish or high cutting load  
On the other hand, the length of 'a' being too long can make tool failure and chattering while drilling

Diameter (ØD)	Length of the 'a' part of center drill		
	Steel	Alloy steel	Non-ferrous metal
25~30	1.2	1.0	1.5
31~40	1.5	1.3	1.8
41~50	1.8	1.5	2.2
51~59	2.2	1.8	2.5
60~75	2.5	2.0	2.8
76~80	3.0	2.5	3.5

### Adjusting diameter of cartridge type drill

- Disassemble a cartridge from the holder by loosening the bolt fixed for outer cartridge
- Machine after calculating the hole size on the side of the outer cartridge
- Trim the sharp part after machining
- Clamp the bolt for fixing cartridge without any gap in between the holder and the machined outer cartridge

- **Range of adjustable drill diameter**
  1. Single cartridge type (Drill diameter  $\varnothing 41\sim\varnothing 59$ )  $\rightsquigarrow$  -1.0 mm
  2. Dual cartridge type (Drill diameter  $\varnothing 60\sim\varnothing 80$ )  $\rightsquigarrow$  -5.0 mm
- **Diameter of the standard drills is provided with maximum size of standards**  
 Ex) WPDC6570-40-6.5  $\rightsquigarrow$  Drill diameter 70.0 mm

Ex) How to adjust drill diameter to  $\varnothing 66.0$  machining with WPDC6570-40-8

$\rightsquigarrow$  To make the drill diameter of outer cartridge to  $\varnothing 66.0$ , machine 2.0 mm. ( $\varnothing 70.0 - \varnothing 66.0 = 4 \rightsquigarrow 4 \div 2 = 2$  (radius))
